

Say bye-bye to parking stress thanks to automated valet parking

BOSCH
Invented for life

6 Easy pickup
With the tap of a finger on the smartphone, the driver summons the vehicle to the pickup point when required.

5 Convenient extras
If the driver wishes, the vehicle can also make good use of the parking time for other things, like driving through the car wash.

4 Safe parking
Additional floor sensors help with parking. The vehicle maneuvers safely and reliably into even the tightest of spaces.

3 Obstacle detection
Blind spots, e.g. at corners, are not a problem, since the cameras detect obstacles and communicate constantly with the vehicle.

1 Easy drop-off
The driver gets out and presses the parking button in the smartphone app. This contacts the parking garage infrastructure, which takes control of the vehicle.

2 Driverless access
The route to the vacant parking space is calculated, and the vehicle is guided there directly by the parking garage infrastructure.
