Assistance systems for commercial vehicles: helpers on roads, tracks and in logistics depots

1. Multi purpose camera for heavy commercial vehicles
   The key technology for video-based assistance systems in heavy commercial vehicles in particular: from lane departure warning through road sign assist to intelligent headlight control.

2. Multi-camera system for forklifts
   Provides forklift drivers with a 360-degree surround view for safe maneuvering in warehouses and logistics depots as well as detection of obstacles.

3. Collision warning system for urban rail systems and streetcars
   Perceives obstacles on tracks in real time, issues warnings to the driver if there is a risk of collision and triggers automatic braking of the vehicle in case of an emergency.
