

Charge electric vehicles easily with Bosch CHARGING APPS

PAY PER CLICK

Find and use charge spots across Europe and conveniently pay using the app.

The Bosch charging apps make electro mobility really comfortable and user-friendly. With the Bosch Software Innovations solution, you can conveniently find and use public, web-enabled charging stations. Also the payment for charging gets a convenient and transparent process.

The Bosch Software Innovations GmbH provides in cooperation with various automotive manufacturers, charging apps as a full service provider. This includes the user interface, the IT infrastructure and the connection to various charge point operators through roaming platforms like Hubject. At the moment, 20,000 charging points from 20 networks in 10 countries are available. The Bosch charging network is constantly expanding.

The public charging market is regionally fragmented and legal conditions are different from country to country. The Bosch Software Innovations GmbH settle contracts with all market players, takes care of the legal conditions, and assume the business and liability risks for our customers. So

the electric vehicle driver can easily use the charging stations without register for every charging network separately. The user needs only the Bosch Charging Apps for an aggregated access to all charging networks and he can use them with only needing a Credit Card or a Pay Pal account.

The charging apps have already put the charging infrastructure right on the smartphone. Now Bosch is taking the next step and putting that infrastructure directly into the vehicle cockpit – with the same look and feel in both forms.

BOSCH SOLUTIONS BENEFITS

- ▶ Easy and simple charging in a public charging networks
- ▶ Broad network of charging stations across Europe
- ▶ Secure, cloud-based software solution
