

Perfectly keyless

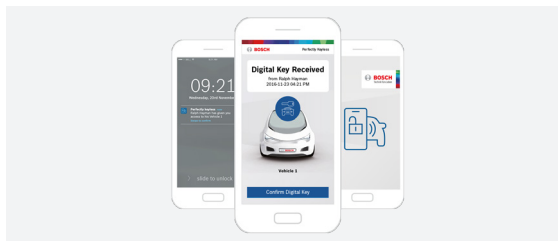

Precise wireless localization and secure key management

BOSCH
Invented for life

The smartphone replaces the vehicle key for greater convenience and flexibility

secure key management

makes it possible to use digital keys on a mobile phone

reliable key location

makes it possible to lock, unlock and start the vehicle securely

- ▶ The keyless vehicle access system allows for passive vehicle access and start, controlled by a digital key on a smartphone, requiring no action on the part of the driver
- ▶ Smartphone and vehicle perform the locking and unlocking processes reliably and with precision
- ▶ When the driver gets out, the vehicle independently starts to search for the key: if the smartphone leaves the locking zone, it automatically locks itself; the driver is notified by a confirmation message on their smartphone; when the driver returns to the locking zone, the car is unlocked automatically
- ▶ Using the app, the registered drivers can grant other users access to their key; this authorization can be set up with time and location limits
- ▶ Each user receives their own personal key, which is sent by cloud; this enables the personalization of vehicle settings for each user
