Body electronics control and monitoring

Powertrain systems and electrified mobility

Connected mobility

Increasing vehicle functionality means that more and more electric and electronic ancillaries are fitted – which makes data and power management as well as reliable battery status tracking all the more important.

secure data transfer

within the vehicle and effective protection from manipulation

extended battery life

thanks to smart power management

- ▶ Bosch offers innovative solutions that make sure information and electrical energy is available at the right place at the right time in complex systems.
- ▶ They include customer-specific solutions, flexibility in adapting to customer requirements as well as global development and manufacturing facilities.
