

Fuel cell- electric drive

Convenient drive solution for long ranges

Powertrain systems and electrified mobility

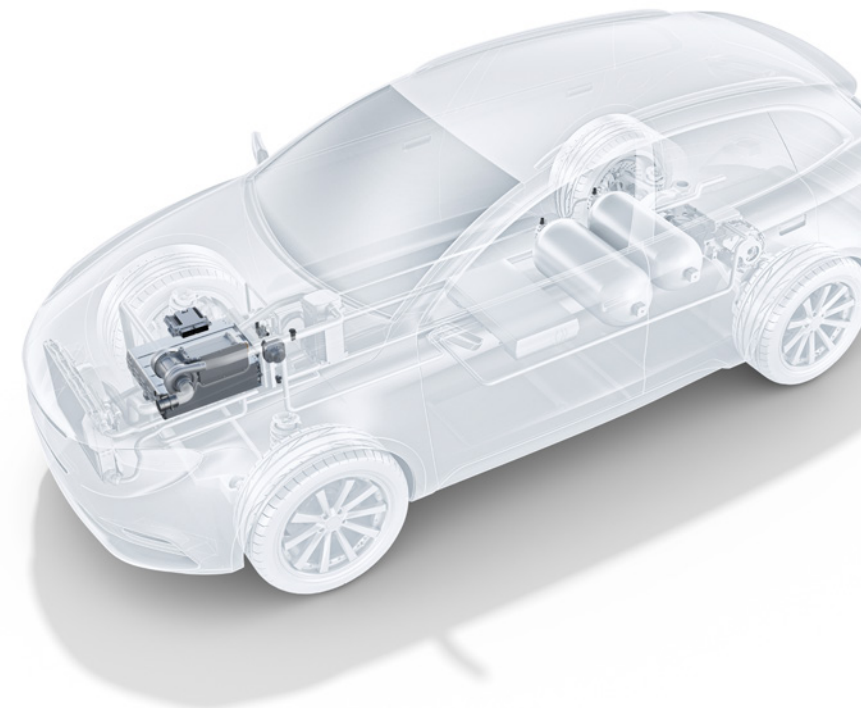

An economical and attractive technology for mobility with zero local emissions

driving fun

thanks to immediate acceleration

comfortable and convenient

Increased range and short refilling time of just a few minutes, enabling journey distances of up to several hundred kilometers

- ▶ The fuel cell-electric drive offers greater convenience and safety through increased range and short refilling time.
- ▶ When covering longer distances up to a range of several hundred kilometers, the zero-local-emissions drive is perfect for long-haul applications.
- ▶ Fuel-cell vehicles are exciting thanks to their similar driving characteristics to an electric vehicle with immediate acceleration.
- ▶ The drive helps to ensure that compliance with current and future emission regulations is maintained, and enables access to restricted low-emission zones.
