

Fuel cell- electric drive

Convenient drive solution for long ranges

BOSCH
Invented for life

Powertrain systems and electrified mobility

An economical and attractive technology for mobility with zero local emissions

driving fun

thanks to immediate acceleration, like in an electric vehicle

comfortable and convenient

Increased range and short refilling time of just a few minutes, enabling journey distances of up to several hundred kilometers

- ▶ Fuel cell-electric drives comprise proven, easily integratable components that Bosch makes ready for production through appropriate research and development.
- ▶ The drive solution offers greater convenience and safety through increased range and short refilling time.
- ▶ When covering longer distances up to a range of several hundred kilometers, the zero-local-emissions drive is perfect for long-haul applications.
- ▶ The drive helps to ensure that compliance with current and future emission regulations is maintained.
